

Trauma overview in pregnancy

Manage as non-pregnant patient (ensure anti-tetanus measures)
 X rays as needed
AVOID: hypoxaemia, hypercapnia, hypovolaemia and hypoglycaemia
 On discharge to report abdominal pain, decreased fetal movements, vaginal bleeding or fluid leakage

© ALSG & CAI 2008

Caesarean Section: If fetal distress or placental abruption with viable fetus or uterine rupture. Consider perimortem / post mortem CS in mother if chance of fetal viability

Secondary survey pathway
